# Aquatic Weed School

September 21-22, 2010 ■ UC Davis

The Aquatic Weed School 2010 is an intensive two-day course focusing on issues associated with developing weed management strategies in a variety of aquatic ecosystems. The course provides a rare opportunity for professionals to efficiently update their understanding of aquatic weeds and interact with experts in this field. The Aquatic Weed School is designed for those involved in consulting, research, and management of aquatic weed systems throughout the western United States.

Topics include:

ecological classification and impacts of aquatic weeds • biology of aquatic weeds • physical and chemical characteristics • regulatory issues (regulation of aquatic herbicides, update on National Pollutant Discharge Elimination System (NPDES) Permitting Program • prevention strategies • eradication strategies • legal aspects of endangered species) • water management for weed control • decision making process for selection of appropriate management options • aquatic weed identification and potentially new invasives • physical and mechanical control methods • biological and chemical controls • restoration and sustainable ecosystem management

The topics are presented in a lecture format. Laboratory activities focus on aquatic weed identification. Each participant will receive a comprehensive notebook with lecture notes and additional information.
